

## RULE 107

### Certification and Emission Statements

- (a) All official documents submitted to the Air Quality Management District (District) shall contain a certification signed and dated by a responsible official of the company. This certification must attest that the information contained in the submitted documents is accurate to the best knowledge of the individual certifying the submission. The requirements of this Section apply to, but are not limited to, the emissions statements required in Section (b).
- (b) In accordance with the requirements of the 1990 Clean Air Act (Section 182 (a)(3)(B)(i)), the owner or operator of any stationary source that emits or may emit oxides of nitrogen or reactive organic compounds shall provide the Air Pollution Control Officer (APCO) with a written statement showing actual emissions of oxides of nitrogen and reactive organic compounds from that source. At a minimum the emission statement shall contain all of the information contained in the Air Resources Board's Emission Inventory Turn Around Document as described in "Instructions for the Emission Data System Review and Update Report." The emission statement shall contain emission data for the time period specified by the APCO. The emission statement shall also contain a certification by a responsible official of the company that the information contained in the statement is accurate to the best knowledge of the individual certifying the statement. The first emission statement shall cover the calendar year of 1992 and shall be submitted to the Air Quality Management District (District) no later than July 1, 1993. Emission statements shall be submitted annually thereafter.
- (c) The APCO may waive the requirements of Section (b) for any class or category of stationary sources which emit less than 25 tons per year of oxides of nitrogen or reactive organic compounds. The waiver is contingent on the District providing the Air Resources Board with an inventory of sources emitting greater than 10 tons per year of nitrogen oxides or reactive organic compounds based on the use of emission factors acceptable to the Air Resources Board.
